# Practical 1: Show steps to create a Simple Project in Android Studio & write a simple “Hello World” Program.

## Step 1: Create New Project in Android Studio

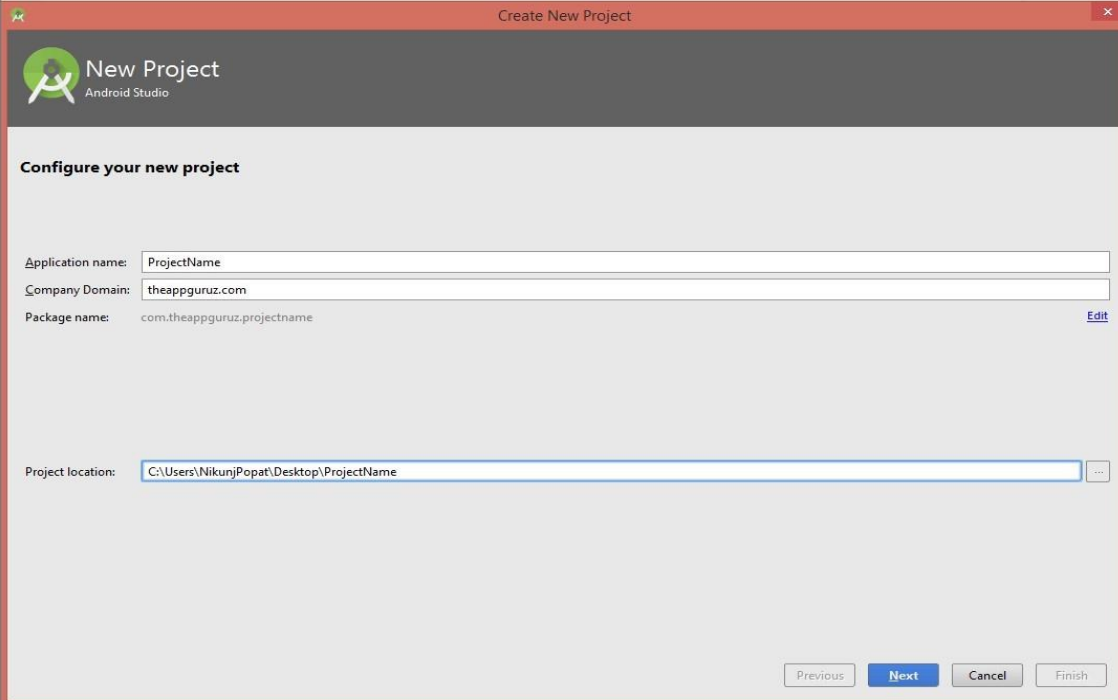

Open Android Studio and go to the `File Menu >> New >> New Project`.

## Step 2: Configure Your New Project

Add your application details over here and hit "Next" button.

i.e.

- Application name
- Company domain
- Package name
- Project location

The screenshot shows the 'Create New Project' dialog in Android Studio. The dialog has a title bar 'Create New Project' and a close button. Below the title bar is the Android Studio logo and the text 'New Project Android Studio'. The main section is titled 'Configure your new project'. It contains four input fields: 'Application name' with the value 'ProjectName', 'Company Domain' with the value 'theappguruz.com', 'Package name' with the value 'com.theappguruz.projectname' and an 'Edit' link, and 'Project location' with the value 'C:\Users\NikunjPopat\Desktop\ProjectName' and a file explorer icon. At the bottom right, there are four buttons: 'Previous', 'Next' (highlighted in blue), 'Cancel', and 'Finish'.

### Step 3: Target Android Devices

Select the form factors your app will be run on. Here, you can select device type for your android application. And at the same time, you select Minimum SDK which will be supported by your android application.

When you select Minimum SDK, Android studio will give you some active android devices percentage that will support your android application.

Otherwise, you can also click on "Help me choose" button for more information about android platform versions.

Create New Project

### Target Android Devices

Select the form factors your app will run on

Different platforms may require separate SDKs

☒ Phone and Tablet

Minimum SDK: API 15: Android 4.0.3 (IceCreamSandwich)

Lower API levels target more devices, but have fewer features available.  
By targeting API 15 and later, your app will run on approximately 96.2% of the devices that are active on the Google Play Store.  
[Help me choose](#)

☐ Wear

Minimum SDK: API 21: Android 5.0 (Lollipop)

☐ TV

Minimum SDK: API 21: Android 5.0 (Lollipop)

☐ Android Auto

☐ Glass

Minimum SDK: Glass Development Kit Preview (Google Inc.) (API 19)

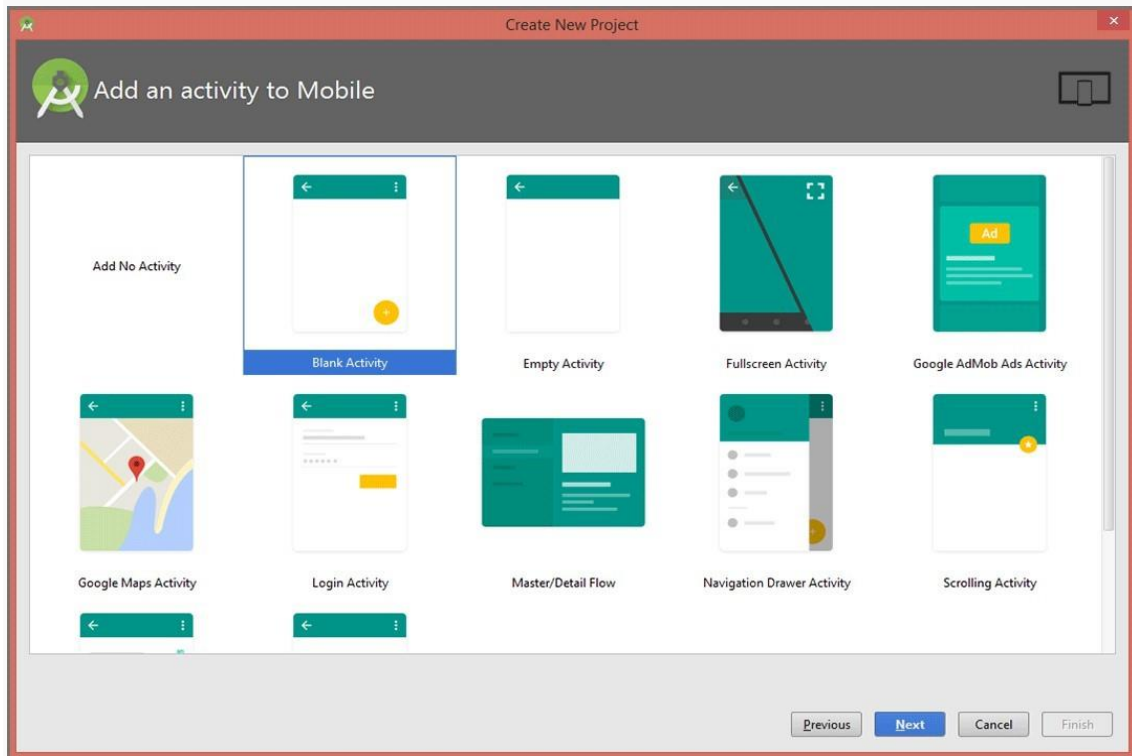

Previous Next Cancel Finish

Hit "Next" button once you are done.

#### Step 4: Add activity

This screen suggests you add any activity at first. If you don't want to add any activity at starting, you can select Add no activity option. If you have selected Phone and Tablet in option in the last screen then it will display the only phone related suggestions. Select Activity as per your project requirements.

For example, select Google Maps Activity for google map project, Blank Activity for blank project etc.

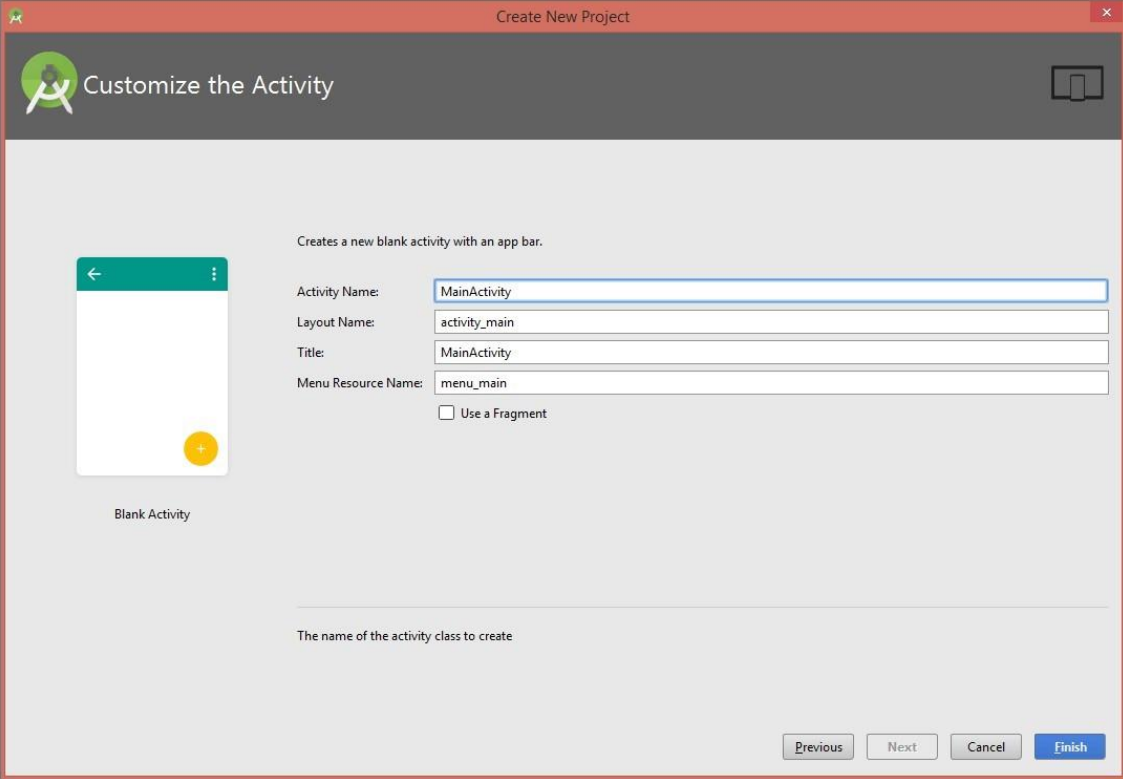

If you are done with it, click "Next" button.

## Step 5: Customize the Activity

Here, you can customize your selected activity. You can change your Activity name from here. And also you can change Layout name (that will be attached to your activity), Title (Title of the activity), Menu Resource Name (Menu's resource file name).

If you want to add fragment to your activity then select Use a fragment option given below.

Create New Project

### Customize the Activity

Creates a new blank activity with an app bar.

Blank Activity

Activity Name: MainActivity

Layout Name: activity\_main

Title: MainActivity

Menu Resource Name: menu\_main

☐ Use a Fragment

The name of the activity class to create

Previous Next Cancel Finish

# Input

## Main Activity.java

```
package com.example.hello.helloworld;
import android.support.v7.app.AppCompatActivity;
import android.os.Bundle;
public class MainActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }
}
```

## activity\_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<android.support.constraint.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
android:background="#00FFFF"
tools:context=".MainActivity">
<TextView
    android:id="@+id/H1"
    style="@android:style/Widget.Holo.TextView.SpinnerItem"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Hello World!"
    android:textColor="#000000"
    android:textSize="30sp"
    app:fontFamily="casual"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintLeft_toLeftOf="parent"
    app:layout_constraintRight_toRightOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
</android.support.constraint.ConstraintLayout>
```

## Output:

## Practical 2: Android Resources: (Color, Theme, String, Drawable, Dimension, Image)

### Color:

#### Color.xml:

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
    <color name="colorPrimary">#008577</color>
    <color name="colorPrimaryDark">#00574B</color>
    <color name="colorAccent">#D81B60</color>
    <color name="colorRed">#FF0000</color>
    <color name="colorBlue">#0000FF</color></resources>
```

#### activity\_main.xml:

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    tools:context=".MainActivity">
    <TextView
        android:id="@+id/textview1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:background="@color/colorRed"
        android:textColor="@color/colorPrimaryDark"
        android:textSize="@android:dimen/app_icon_size"
        android:text="Shaliendra Education Society's"/>
</LinearLayout>
```

#### OUTPUT:

## Styles:

styles.xml:

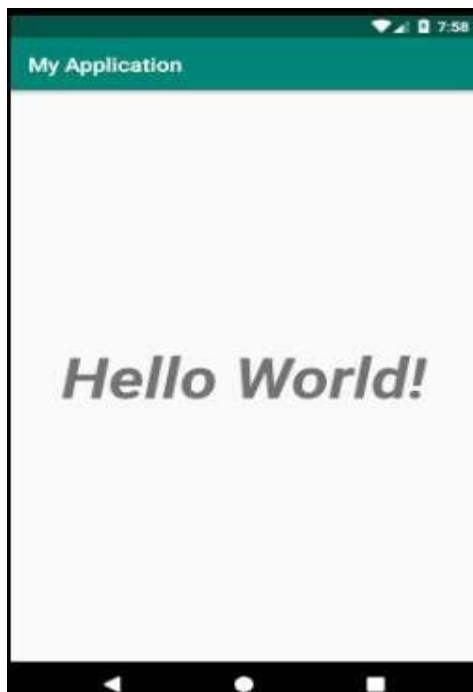

```
<resources>
    <style name="BlueTheme" parent="Theme.AppCompat.Light.DarkActionBar">
        <item name="colorPrimary">@color/colorPrimary</item>
